

**Pacific Paradise, Timari Street
Streetscape Project**

Project number: P-B3895

Timari Street Pre-Construction WorkWednesday 7 June to late June 2017
(weather permitting)

Council plans to undertake some minor pre-construction work in preparation for the upcoming construction of the Timari Streetscape Project which is due to start in early July 2017. Minor pre-construction work is required to relocate the existing overhead electrical power lines at the northern end of Timari Street to an underground system, refer to Figure 1 overleaf.

Start date

This work is scheduled to start on Wednesday 7 June 2017. Completion is expected within 2 weeks (weather permitting).

Work hours will be between 7am and 5pm, Monday to Friday with some minor exceptions required to change over the power supply to adjacent properties. This will be discussed and managed directly with affected property/business owners.

**What to expect during
construction**

Work involves:

- Installing new conduits and electrical cables under road and footpaths at the northern end of Timari Street.
- Removal of the existing overhead power lines crossing Timari Street and the northern end.

- Change-over of electrical connection to properties on the north-east corner of Timari Street (council will contact directly affected property/business owners to discuss this work in detail).

Changes to traffic conditions

The project team is making every effort to minimise impacts on the community, however businesses, residents and the general community can expect some changes to traffic conditions.

At times during construction, road shoulder closures and single-lane traffic control will be required to complete the work.

Traffic management measures will be in place to ensure the safety of pedestrians and motorists. Delays will be kept to a minimum where possible.

Council apologises for any inconvenience and would like to thank you for your patience during this work.
